

Cross-panel placement of headline diversity statistics  
(this n=95 panel vs Shitta 2022 n=169 vs Olomitutu 2022 n=195; each panel under its own QC)

n.r. = not reported in the source publication. Olomitutu et al. 2022 (Genes 13:2350) report only mean MAF and mean  $H_o$ ; PIC,  $n_e$ , AMOVA and pairwise  $F_{ST}$  are absent from the published tables and the supplementary marker matrix is not available for re-derivation. Shitta et al. 2022 (Sci Rep 12:4437) does not report  $n_e$  or  $H_o$  SEM. Cells marked n.r. reflect this data-availability asymmetry, not missing analysis on our side.
